1. [Overview](#)

This document provides instructions on how to integrate with a Jh Police OCCIS RESTful API using HTTP/HTTPS protocols. RESTful APIs are stateless, meaning that each request is independent of any previous requests. REST APIs use HTTPS methods such as GET, POST, PUT, PATCH, and DELETE to perform actions on resources. Current OCCIS APIs are for criminal verification via OCCIS Mobile App for OCCIS project.

1.1. [API Documentation](#)

The documentation includes:

1. Authentication method and credentials required
2. Endpoints and their associated HTTP methods
3. Sample Request and response formats
4. Error handling and expected HTTP status codes

2. [Authentication](#)

Authentication is used to verify the identity of the client making a request. This API uses JSON Web Tokens(JWT) authentication mechanisms. The authentication method will be specified in the API documentation. It is important to ensure that the API key or token is kept secure and not shared with unauthorized parties.

3. Jh Police OCCIS APIs :

The RESTful API configuration parameters are given below:

3.1 Health check

To check if API is working fine or not

Title	Description
